

Opportunity

eCarUp is a highly innovative and flexible charging solution for electric cars. eCarUp enables the renting of (semi)private charging stations to foreign users and provides an automated billing tool for the loading processes (Airbnb for charging stations). Charging stations are upgraded with intelligent measurement technology (inhouse development) with the help of one of our inexpensive upgrade sets. Extensive customization functions ensure a user-specific configuration of individual charging stations that are tailored to the customers' individual needs and preferences.

For the reinforcement of our eCarUp founding team, we are looking for a

Senior Software Engineer (Full Stack), (m/w), 100%

Responsibilities

- You play a significant role in building our core application in order to change the future of e-mobility;
- You are spearheading the development of our cloud-environment, our web-tools and our apps (Android and iOS) and you are shaping the technological advancement of our integrated solution;
- You align your coding both for high performance as well as easy maintainability;
- You are proactive in your approach to problem identification and resolution and overcome obstacles with an open mindset;
- You are responsible for the overall project management of the technological development and ensure an efficient communication with other departments;
- You oversee and organise the build-up of an efficient software developing unit.

Minimum qualifications

- BA/BS degree in computer science or related technical field or equivalent practical experience;
- Strong knowledge of C#, ASP.NET & Web API;
- Team-oriented with an entrepreneurial spirit and self-initiating.

Preferred qualifications

- MS or PhD in computer science;
- Knowledge of app development with Xamarin;
- Experience in architecting and developing large scale distributed systems;
- Knowledge of NOSQL databases;
- Previous start-up experience is a plus;
- Speaking German, Italian or French is a plus.

Perks

- Work on a highly innovative and potentially disruptive product;
- Equity / virtual stock options - be part of our success story;
- Dynamic and challenging start-up environment and the cooperation with an interdisciplinary and performance oriented team;
- High flexibility with work location and hours;
- Open work atmosphere, short decision paths and direct influence on company success.
